Getting Started

Kit Contents:

- Tracking device (with internal antenna)

Tools Required for Installation:

- None

Installing the GPS Device:

With the engine running, plug the tracking device into the OBDII connector of the vehicle and do NOT turn off the ignition.

NOTE: Be sure the vehicle's ignition is on, and its engine is running during the entire initial set-up process.

Leave the unit plugged in, with the engine running, until the detection/activation process has completed.

Placement of the Device:

The tracking device will inevitably be installed in the location of the vehicle's OBD2 port. Normally, this port is located near the left or right of the base of the steering column. Other popular locations are either side of the center console, the driver's-side kick panel and directly under the dash.

NOTE: Be sure to test the unit after installation by verifying the LED status.

Verify Installation:

The tracking device is equipped with three status LEDs, one for GPS status, one for vehicle detection and one for wireless network status, or 'COMM'. For proper operation, all LEDs should be solid ON during use. (see diagram)

After verifying the installation using the LEDs, cycle the ignition on and off before logging into the UI to check for a Power Reconnect followed by ignition on and off events denoting proper functionality. (see sample vehicle history)
